

We are now recreating classic instruments of the 60's with our most recent range being sympathetic to those used in the GT40 at LeMans in 1966. Modern touches include through dial and pointer illumination that provide the driver with the ability to see the instruments clearly at night, unlike the ones in my mini! The speedometer is programmable and the tachometer is unlike the original that had a tendency to wave at you madly under race conditions. Pressure and Temperature gauges are available in mechanical or electrical for ease of installation. We look forward to restoring instruments from your vehicle or creating instruments in keeping with the period that your vehicle represents.

Please discuss your particular requirements with Rodger Howard this weekend at our trade stand on Shannons Walk or on 0408170103
