The Company

4

Siemens VDO Automotive is one of the world's leading suppliers of electronics, electrics and mechatronics to the automotive industry. In the 2004 business year (30.9.), Siemens VDO Automotive generated sales of EUR 9.0 billion with about 48,000 employees.

The service activities, the special original equipment manufacturing as well as all content software business for navigation systems are bundled within the Service & Special Solutions business unit, represented in Germany by Siemens VDO Trading GmbH. With 2,900 employees the business unit runs separate production and development locations and is present in 80 countries and all relevant distribution channels.

With the VDO, VDO Dayton and Siemens VDO product brands, the company's portfolio ranges from car navigation, car multimedia and sophisticated car audio systems to telematics solutions for private and public vehicle fleets. Industrial and marine products for original equipment manufacturers with low volumes or special requirements, genuine brand replacement parts and a spare parts service for end of production vehicles complete the product portfolio. Service & Special Solutions is one of the leading service companies in the automotive market.

Siemens VDO is the product brand for genuine brand replacement parts, including fuel systems, engine actuators, HVAC blower and fan systems, screen and headlight washer systems, actuators for central locking systems and sensors.

Siemens VDO offers customer focused, innovative and, above all, practical solutions featuring original equipment quality. Siemens VDO – delivering expertise in the field of genuine brand replacement parts.

Outstanding quality and outstanding service

Thanks to stringent quality management, Service & Special Solutions has DIN EN ISO 9001:2000 and VDA 6.2 certification. In addition, our products meet all road traffic regulations relating to the German and international markets.

Keeping the wheels turning

Having fuel in the tank is crucial to vehicle operation. Without it the engine simply will not work. But a full tank of fuel is no use if the fuel supply from tank to engine isn't totally reliable. High-quality Siemens VDO fuel supply systems offer that assurance.

Idle running of pumps, contaminated fuel or faults in the vehicle electrics can lead to failure of individual components or, in a worst-case scenario, to failure of the entire system. Siemens VDO genuine brand replacement parts enable trouble-free replacement with low installation outlay and top quality.

The product range includes:

- Fuel Supply Units
- Fuel Pumps with Swirl Pot
- Fuel Pumps
- Fuel Filters
- Lever-Type Senders
- Tubular-Type Senders
- Fuel Pressure Regulators

Fuel Supply Units

Electric next-generation fuel pumps/fuel supply units installed in tanks guarantee a permanently reliable supply of fuel to the engine. They are employed as in-tank pumps for combustion engines, with injection systems for petrol or diesel supply. A return-flow returns unused fuel to the tank.

The primary functions are:

- Fuel supply of the individual or central injection system, with specified pressure and throughput, once the in-vehicle voltage has been switched on
- System pressure retention in the fuel supply line under all operating conditions

Fuel Supply Units

The fuel supply unit generally consists of the fuel pump (sometimes with swirl pot), a filter and flange with corresponding connections. In addition, the supply unit can be equipped with a lever-type sender and can be used in combination with an immersion tubular-type sender.

Fuel Supply Units

Fuel Filters

Fuel Filters

Fuel filters are an important part of every fuel supply unit, providing vital protection for fuel systems and engines against damage caused by tiny particles of dirt.

Depending on the system, one or more filters can be fitted in conjunction with a fuel pump or supply unit.

Lever-Type Senders

Fuel tank contents are measured by means of senders (lever-type/tubular-type senders), which either form one unit with the pump or are installed separately.

Lever-Type Senders

Lever-type senders, in conjunction with an electrical indicator, are used to measure the fuel level.

How they work

The liquid of the fuel level to be measured contains a floater which rises or falls when the level changes and, by means of a lever, then causes a brush wiper spring to be moved on a resistance winding or a thick-film resistor. In both cases, an adaptation to the tank characteristics is implemented.

A resistance value corresponding to the liquid level is generated. The value of the respective resistance is measured by an electrical indicator and displayed in terms of fuel level values. With some transmitters the grounding is attached to the casing. Other transmitters are without grounding, i.e. the grounding is routed over a separate connection.

Lever-type senders can be additionally equipped with a warning contact in order to signal the attainment of a filling level limit value (reserve), as well as for continuous measurement.

Tubular-Type Senders

Tubular-Type Senders

Immersion tubular-type senders are also used for measuring the fuel level, in association with an electrical indicator.

How they work

The liquid of the fuel level to be measured contains a floater, which rises or falls when the level changes. Contact springs, which are attached to the floater, slide over two resistance wires running parallel to the floater movement and generate a resistance value which is proportional to the liquid level. The value of the respective resistance is measured by an electrical indicator and displayed in terms of fuel level values.

The liquid to be monitored reaches the conduit through a flood boring. By this means, the inflow and outflow speed and the transmission of short-term variations of the liquid level to the floater contained in the conduit (e.g. due to cornering or braking) is dampened.

With some transmitters the grounding is attached to the casing. Other transmitters are without grounding, i.e. the grounding is routed over a separate connection.

Tubular-type senders can be additionally equipped with a warning contact in order to signal the attainment of a filling level limit value (reserve), as well as for continuous measurement.

Fuel Pressure Regulators

Fuel Pressure Regulators

The fuel pressure regulator is attached at the end of the distribution pipe and keeps the fuel pressure at a constant value. Located in the metal casing of the fuel pressure regulator there is a spring-loaded membrane, which allows the opening of the return-flow channel if the set pressure is exceeded. In this way, surplus fuel can flow back to the fuel tank.
