Notes about the Structure of the catalogue

Contents – This catalogue contains product information about Siemens VDO sensors for engine management.

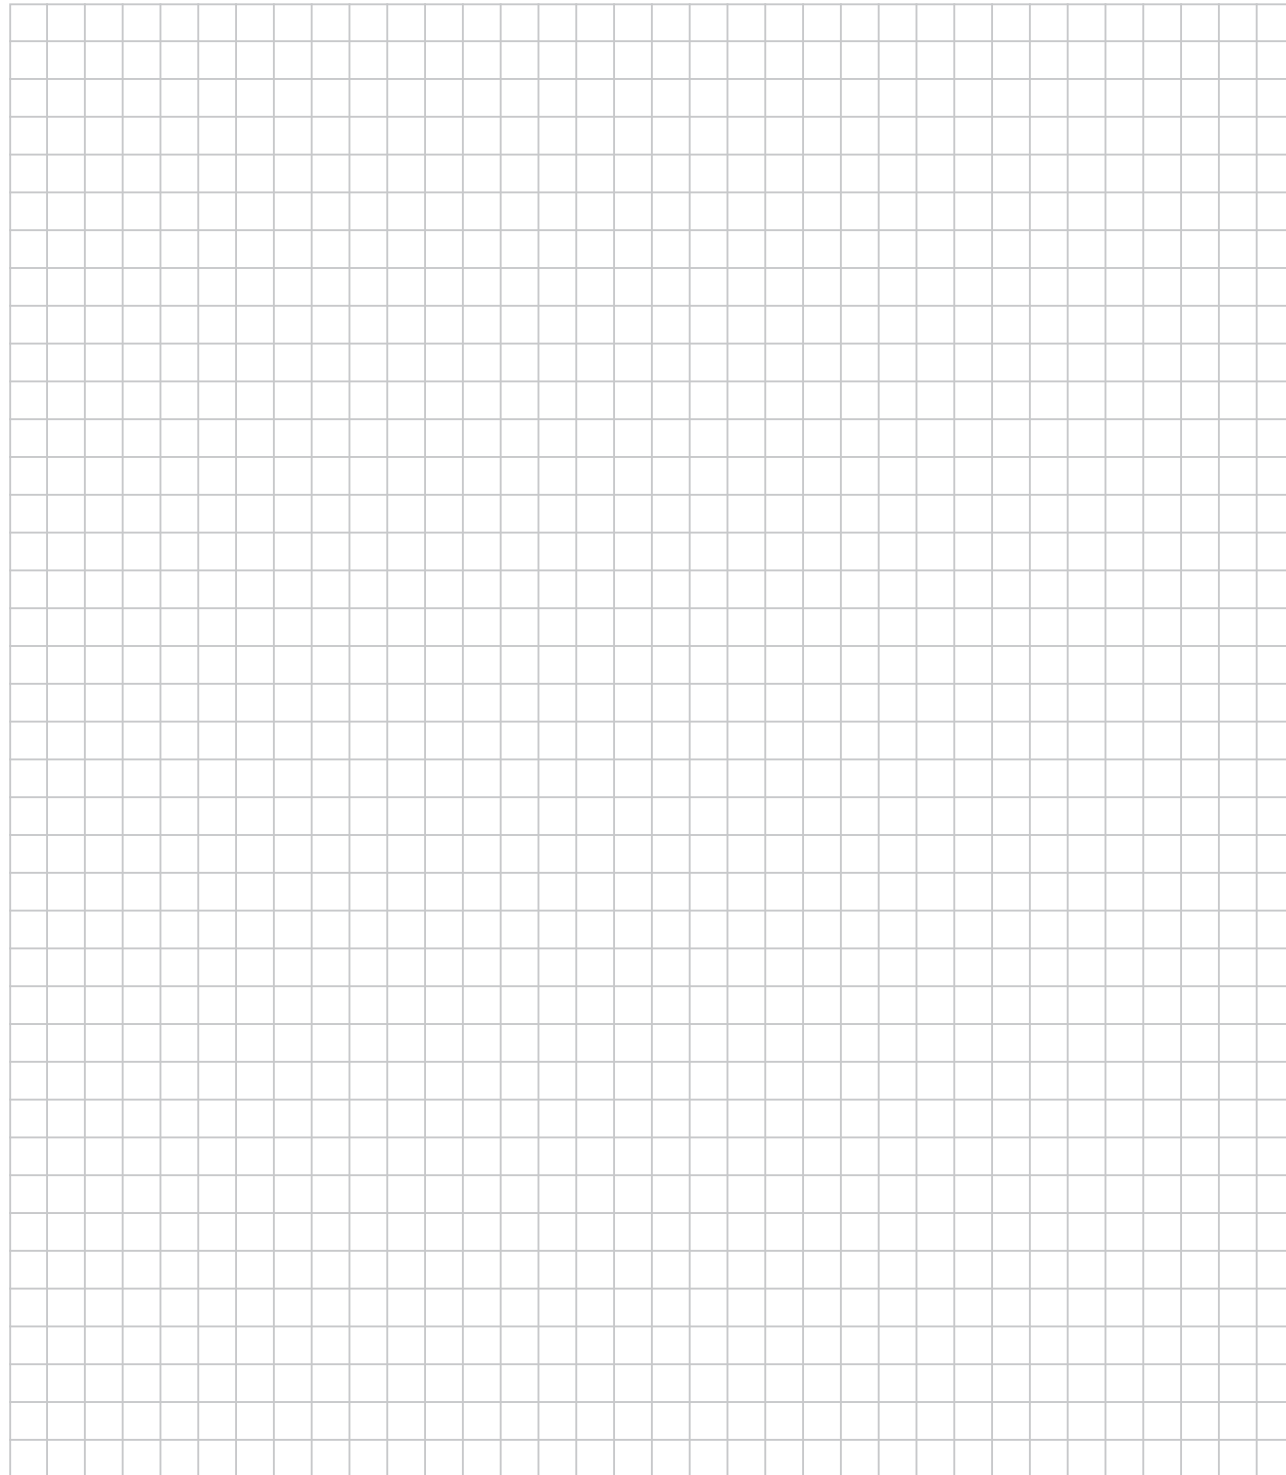

Structure – The first section contains information about Siemens VDO as a company. The subsequent product section is divided up according to product group. At the start of each subsection there is an overview of all the model variants within the respective product group, followed by a section where the corresponding individual model variants are arranged by vehicle make and model. The list of cross-references at the back of the catalogue features the individual products arranged by OE/Article No.

Abbreviations – An overview of all the abbreviations used in the catalogue can be found on the foldout page at the back of the catalogue.

Please note:

Application – The products described in this catalogue are designed for use in land vehicles, engines and equipment.

Disclaimer – The data in this replacement parts catalogue has been compiled and processed for the purpose of presenting our replacement parts range and is correct to the best of our knowledge. Subject to technical alterations, errors and omissions. Availability is not guaranteed. We cannot be held liable with regard to any information contained in the Siemens VDO replacement parts catalogue except in case of intent, gross negligence or where mandatory liability is borne in accordance with German product liability law.

Legend

Abbreviation	Description
MAFS	Mass Airflow Sensors
WSS	Wheel Speed Sensors
CaSS	Camshaft Sensors
CrSS	Crankshaft Sensors
KS	Knock Sensors
PS	Pressure Sensors
(+) ...	For ...
(o) ...	Also for ...
(-) ...	Not for ...
T1: ...	Mounting side: ...
T2: ...	Required number of pieces: ...
T3: ...	For OE number: ...
T4	For vehicles with left-hand drive
T5	For vehicles with right-hand drive
T6	For vehicles with antilock brake system
T7	For vehicles without antilock brake system
T8	Manual transmission
T9	Automatic transmission
T10	Automatic transmission – 4 gear
T11: ...	Transmission number: ...
T12: ...	Restriction (manufacturer): ...

Mobility shapes our life – moving ahead is our passion

Our passion for mobility helps us attain new goals. Mobility is freedom – and for us, as a worldwide supplier to the automotive industry, it is both our vision and our fascination. Our enthusiasm for technology in all segments of modern automotive electronics and mechatronics unites Siemens VDO employees across linguistic boundaries and 130 countries.

Quality Management System
DIN EN ISO 9001:2000
VDA 6.2

Genuine brand replacement parts that fit to perfection

Alongside our many specialised solutions for automotive manufacturers, we also offer broadbased solutions and service for the aftermarket. Genuine brand replacement parts that benefit from the experience and proven expertise of an OEM supplier are our particular strength. Our comprehensive range of replacement parts is readily available and features a perfect fit for maximum ease of installation, offering significant advantages for distributors, workshops and consumers alike.

Solutions:

- Sensors for Engine Management
- Engine Actuators
- Fuel Systems
- HVAC Blower and Fan Systems
- Actuators for Central Locking Systems
- Screen | Headlight Washer Systems
- Sensors for Instrumentation

Counterfeit protection

There has been a steady increase in the number of counterfeit and pattern parts in recent years. This can have disastrous consequences and cause legal problems if products are of inferior quality. This is why our tamperproof counterfeit protection labelling is being introduced on selected products now to protect you and your customers. Look out for the new security label on sensors for engine management.

Further information about counterfeit and pattern parts, and about the new labelling, can be obtained from your Siemens VDO contact.

Sensing and forwarding information

A wide variety of information is required to ensure reliable, safe and efficient vehicle operation. Sensors capture and transmit the necessary data. To fulfil this task they need to be resistant to temperature, moisture, dirt and chemicals. So that the information provided is as reliable as possible the sensors also need to function perfectly within electromagnetic fields and in the presence of other sensors, in addition to offering a long service life.

Sensors can help cut fuel consumption and harmful emissions. They play a part in boosting engine efficiency and vehicle safety to ensure greater driving comfort and enjoyment. Defective sensors can lead to engine management faults and in worst-case scenarios cause engine damage.

Sensors for Engine Management:

- Mass Airflow Sensors
- Wheel Speed Sensors
- Camshaft Sensors
- Crankshaft Sensors
- Knock Sensors
- Pressure Sensors

Mass Airflow Sensors

A growing focus on reducing CO₂ emissions means that mass airflow sensors are becoming increasingly important in ensuring the optimum air fuel ratio. Mass airflow sensors are positioned directly after the air filter in the intake manifold and supply information on temperature, humidity and intake air volume. Despite their highly compact construction they feature precision technology to capture information which – together with other engine data – enables a perfect engine management.

This data includes:

- Intake air temperature
- Intake air humidity
- Intake air volume

In gasoline engines, mass airflow measurement is used in conjunction with other sensor readings to regulate the supply of fuel to the engine.

In diesel engines, mass airflow sensors are used to regulate the exhaust gas recirculation rate and calculate the maximum injection quantity.

Siemens VDO mass airflow sensors are exceptionally reliable and highly capable of withstanding environmental factors. Their dynamic measurement ability is an important contribution to reducing vehicle emissions.

Camshaft Sensors

The camshaft sensor is located in the cylinder head and reads the camshaft sprocket to determine the position of the camshaft. This information is required for functions such as initiating injection on sequential injection engines, the trigger signal for the magnet valve on pump valve injection systems and for cylinder-specific knock control.

Crankshaft Sensors

The crankshaft sensor supplies information on the crankshaft's current position, which the engine management system can then use to calculate rpm. These values make it possible to determine the most economical fuel injection and ignition timing for a vehicle.

Knock Sensors

Modern engines which allow high compression ratios have a distinct disadvantage: their design leads to increased knocking, which can damage the engine. Knock sensors reliably measure the vibration of the engine block that is characteristic of engine knocking. This allows the firing angle and other parameters to be set such that the engine continues to function correctly close to the knock threshold. This not only protects the engine but also reduces fuel consumption. To ensure maximum precision, Siemens VDO knock sensors deploy groundbreaking bandwidth technology.

Pressure Sensors

MAP and T-MAP sensors measure the air pressure in the intake manifold behind the throttle valve to determine air intake. This information is extremely important for calculating the amount of fuel to be injected to ensure the correct air fuel mix. For this reason, the dynamic measurement capability of these engine management components is crucial in reducing vehicle emissions.

- MAP pressure sensor for turbocharged engines for measuring air pressure behind the turbocharger (measurement range 500–3000 hPa)
- T-MAP pressure sensor with integrated temperature sensor
